EDUCATION

Constructor University Bremen — **Sept. 2021 - Jun. 2024 (Estd.)**
B.Sc. Computer Science, Mathematics minor — Bremen, Germany

- Notable Courses: Software Engineering, Database and Web Services, Algorithms and Data Structures, Computer Networks, Operating Systems, Distributed Algorithms, Machine Learning, Artificial Intelligence, Secure and Dependable Systems

EXPERIENCE

Constructor University Bremen - Teaching Assistant — **Bremen, Germany**

Numerical Methods — Feb. 2023 - Present

- Collaborated with peers and the instructor to create and solve challenging problems, and give tutorials on:
  - root finding, interpolation, approximation, numerical differentiation, numerical integration (quadrature), and numerical solutions for differential equations

Programming in C/C++ — Sept. 2022 - Dec. 2022

- Debugged and validated code, and gave tutorials to over 200 students regarding:
  - pointers, pointer arithmetic, object-oriented programming, dynamic memory allocation, data structures, templates, macros, header files, makefiles

Introduction to Computer Science — Sept. 2022 - Dec. 2022

- Coordinated tutorials to reduce students' doubts on:
  - **functional programming** (Haskell), **assembly programming**, computer science foundations, discrete mathematics, Boolean algebra, Hoare's logic, and combinational and sequential digital circuits

PROJECTS

Rippit

- Developed collaboratively a frontend and backend of a forum website using **VCS (git)** and integrated search suggestions and map functionality using **jQuery** and Leaflet library
- Implemented backend using **PHP** and **MySQL** to connect the website and **MongoDB** database server with query-dependent access rights using sanitized SQL queries

Bug World

- Collaborated in agile sprints using git to build and improve different code bases for a full-stack simulation game in **JavaScript**, **HTML**, and **CSS**
- Engineered and implemented a parser, assembler, simulator, and GUI using **OOP** principles, and created automated test cases to ensure robustness and functionality
- Authored and maintained detailed technical documentation and comprehensive specifications

Room Booking System

- Designed and built a **Java**-based, user-friendly, and intuitive **CLI** room booking system with file **I/O**, dynamic matching, and custom **data structures** for efficient data management

Flutter Projects

- Created multi-page Todo application and Weather application in **Flutter** using MVVM architecture, Material 3 design, HTTP responses, OpenWeather API, and SQL database

Spam Email Extracter

- Created a **C++** program to extract 57 attributes from UCI's Spambase Data Set for spam email detection

TheOdinProject

- Designed and built 3 GUI-based applications: etch-a-sketch, calculator and rock paper scissors game using CSS, HTML, and JavaScript

Scrpr

- Implemented an interactive Python Discord bot that utilizes `bs4`, `requests`, and `RegEx` libraries to scrape images and metadata from a static website

Bremen, Germany, 01/06/2023 Ayam
